The invention relates to an isolated polypeptide comprising CGDD1-12 (cell growth, differentiation and death), a naturally occurring amino acid sequence at least 90% identical to CGDD, a biologically active cord sequence at least 90% identical to CGDD, a biologically active crispens or an immunogenic fragment. Also included are the polymucleotides encoding CGDD-12, a recombinant polymucleotide comprising a promoter sequence operably linked to the CGDD comprising a promoter sequence operably linked to the CGDD polymucleotides, a cell transformed with the recombinant polymucleotide, an anticartive cordination of CGDD polymucleotide microarray. The polypeptides, polymucleotide and a cGDD polymucleotide microarray. The polypeptides, polymucleotide and a gonists and antagonists are useful for diagnosing, treating or preventing disorders associated with aberrant expression of CGDD, particularly cell proliferative (e.g. arteriosclerosis, atherosclerosis, cirnosis, hepatitis, paroxysmal nocturnal haemoglobinuria, polycythaemia cycla, polycitaemia, particularly cell proliferative (e.g. arteriosclerosis, atherosclerosis, cirnosis, primary thromobocytopaenia or cancer), developmental disorders (e.g. Alzheimer disease, Parkinson's disease or enurological disorders (e.g. Alzheimer disease, Parkinson's disease or collection and products, contact dermatitis, crohn's disorders (e.g. infertility or a disruption in the menstrual cycle), or autoimmune/inflammatory disorders (e.g. Alzheimer disease, alabetes mellitus, crohrat dermatitis, crohn's disease, matemia or mental retardation, osteoporosis, pancreatitis, rheumatoid arthritis, contact dermatitis, crohn's disease, matemia or mental retardation, osteoporosis, pancreatitis, rheumatoid arthritis, crohrat dermatitis, trohn's disease, matemia or mental retardation of concert dermatitis, trohn's disease, matemia or mental retardation, osteoporosis, pancreatitis, prover with a sessessment of the effects of exogenous compounds on the expression of nucleic acid and amino acid a compa

It was isolated from a MDA-MB-175 human breast cancer cell library after screening with an EGF-like domain. Compared to gamma-HRG cDNA (see AAV19251), clone 20 contains a 78 base insert between codons 560 and 561, and lacks the 5' end. The truncated gamma-HRG was insoluble when expressed as a thioredoxin fusion protein in Escherichia coli cells. Gamma-HRG nucleic acid and polypeptide are claimed, together with their uses e.g. for enhancing the proliferation, differentiation or survival of glial or muscle cells
                                                                                                                                                                                                                                                                                                 Gamma-heregulin; gamma-HRG; human; autocrine growth factor;

                                                                                                                                                                                                                                                                                                                                   The invention comprises the amino acid and coding sequences of novel proteins. The DNA and protein sequences of the invention are useful as: markers for tissues in which the corresponding protein is preferentially expressed, as molecular weight markers on gels; as chromosome markers or tags; to identify chromosomes or to map related gene positions, and to compare with endogenous DNA sequences in patients to identify potential genetic disorders. The present DNA sequence represents a gene of the
                                                                                                                                                                                                                                                              New polynucleotides, useful for expressing recombinant proteins for analysis, characterization or therapeutic use, or as markers for tissues in which the corresponding protein is preferentially expressed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ThraspileGlyLeuProGlnCysGlyTyrSerMetGlyAlaGlySerAspAlaAspMet

The present invention describes novel human proteins designated NOVX, where X is 1 to 20 e.g. NOV1. NOVX sequences can have neuroprotective, where X is 1 to 20 e.g. NOV1. NOVX sequences can have neuroprotective, cytostatic, anticonvulsant, cerebroprotective, notitopic, cardiovascular, antidiabetic, antidinflammatory, antithematic, antiabacterial, curucide, immunosuppressive, antidialergic, antidanaemic, antibacterial, fundicide, composition and antihelminthic activities, and can be used in gene therapy. The NOVX proteins, nucleotides or antibadies can be used in the manufacture of a medicament for treating a syndrome associated with a composition of a medicament for treating a syndrome associated with a composition of a leasant of a medicament for treating a syndrome associated with a composition of a cancer of the liver, lung, muscle, ovary, testis and uterus), neurological disorders (e.g. epilepsy, stroke, ischaemic cerebrovascular disease, Alisteimer's disease or pick's disease, disorders of vesicular transport (e.g. cystic fibrosis, diabetes mellitus, Grave's disease, or goitre, y gastriointestinal companies aucoimmune diseases (e.g. ulocrative colitis, or gastric and duodenal disorders), aucoimmune haemolytic anaemia, or rheumatoid arthritis), viral, bacterial, fungal, helminthic
                cancer; leukaemia; lymphoma; melanoma; neurological disorder; epilepsy;
stroke; ischaemic cerebrovascular disease; Alzheimer's disease; allergy;
                                                    Pick's disease, vesicular transport disease, cystic fibrosis, goitre, diabetes mellitus, Grave's disease, gastrointestinal disorder, vaccine, ulcerative colitis, gastric disorder, duodenal disorder, infection, autoimmune disease, allergic reaction, autoimmune haemolytic anaemia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Tchernev VT, Spaderna SK, Gorman L,

New NOVX polypeptides and polymucleotides useful for treating NOVX-associated disorders, such as cancers, neurological disorders, disorders of vesicular transport, gastrointestinal disorders, and autoimmune

Claim 8; Page 110-112; 444pp; English

manufacture of a medicament for treating a syndrome associated with a human disease selected from NOVX-associated disorder, such as cancers care, it is that and uterus), neurological disorders (e.g. epilepsy, stroke, ischamic cerebrovascular disease, Alzheimer's disease or picks disease, disorders of vesicular transport (e.g. cystic fibrosis, disease), disorders of vesicular transport (e.g. cystic fibrosis, disease), disorders of vesicular transport (e.g. cystic fibrosis, disorders of vesicular transport (e.g. cystic fibrosis, disorders (e.g. ulcrative colitis, or gastric and duodenal disorders), autoimmune diseases (e.g. allergic reactions, autoimmune haemolytic anaemia, or rheumatoid arthritis), viral, bacterial, fungal, helmithic anaemia, or rheumatoid arthritis), viral, bacterial, fungal, helmithic conditions and as vaccines. The NoVX nucleotide sequences may be used in chromosome mapping, identifying individuals from minute biological samples (tissue typing), and in forensic identification of a biological sample. The present sequence encodes human NoVISa, which is The present invention describes novel human proteins designated NOVX, where X is 1 to 20 e.g. NOV1. NOVX sequences can have neuroprotective, cytostatic, anticonvulsant, cerebroprotective, nootropic, cardiovascular, antidiabetic, antiinflammatory, antirhemmatic, antiarthritic, virucide, immunosuppressive, antiallergic, antianaemic, antibacterial, fungicide, protozoacide and antihelminthic activities, and can be used in gene therapy. The NOVX proteins, nucleotides or antibodies can be used in the manufacture of a medicament for treating a syndrome associated with a

The methods and compositions of the present invention are useful for detecting, diagnosting, straging, monitoring, prognosticating, preventing and/or treating diseases and conditions relating to breast cancer, and may be used in gene therapy or antisense therapy. They can also be used in research, drug discovery, clinical medicine and forensic medicine. Sequences given in records ACCT2012-ACCT2074 represent polynucleotides of the invention that are differentially-regulated in breast cancer. NOTE: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MetAspVallysGluArgLysProTyrArgSerLeuThrArgArgArg---AspAlaGlu 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ArgArgTyrThrSerSerSerAla***SerGluGluGluGlyLysAlaPro---GlnLysSer 38

The invention relates to human FCTRX polypeptides, FCTR1-FCTR7, and the nucleic acids encoding them. These sequences are useful for the treatment or prevention of numerous disorders including myelogenous leukaemia, carcinomas, melanomas, gliomas, astrocytomas, congenital neonatal

Novel polypeptides designated as FCTRX polypeptides, useful in detection, prevention and treatment of a broad range of pathological states.

The invention relates to FCTRX polypeptides and the polynuclectides canceding them. The sequences of the invention are useful for the encoding them. The sequences of the invention are useful for the encoding them. The sequences of the invention are useful for the case cancer of a medicament for diagnosing and treating disorders associated with the FCTRX polypeptide, such as colorectal cancer, adenomatous polyposis coli, myelogencus leukaemia, congenital neonatal adenomatous polyposis coli, myelogencus leukaemia, congenital neonatal cumours, mammary tumours, human gliomas, astrocytomas, renal cell autoinmum, breast adenocarionoma, ovarian carcinoma, melanomas, clear carcinoma, breast adenocarinomas, neurological disorders, cell and granular cell carcinomas, neurological disorders, control familial myelodysplastic syndrome, Charcot-Marie-Tooth neuropathy, Gardner syndrome, mental health conditions, immunological disorders, allergy and infection, methal lung conditions, immunological disorders, allergy and infection, sethma sthma, lung deficiency, desmoid tumour, turcot syndrome, liver cirrhosis, hepatitis conditions, spinocrebellar ataxia, plasmodium falciparum infection, groencuw's corneal dystrophy and lattice corneal dystrophy. This sequence creates cDNA encoding an FCTRX polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    326
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           38

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ð
                                                                                                                                         Clone 20 encodes an N-terminally truncated isoform (see AAW44818) of human gamma-hRc9 (see also AAW44817), a novel member of the heregulin (seegalin (see also AAW44817), a novel member of cancer cell library after screening with an EGF-like domain. Compared to gamma-HRG cDNA (see AAV1921), clone 20 contains a 78 base insert between insoluble when expressed as a thioredoxin fusion protein in Escherichia codons 560 and 561, and lacks the 5' end. The truncated gamma-HRG was insoluble when expressed as a thioredoxin fusion protein in Escherichia with their uses e.g. for enhancing the proliferation, differentiation or survival of glial or muscle cells

This nucleic acid molecule codes for human gamma-heregulin (gamma-HRG)

(Gee ANM44817), a novel member of the heregulin superfamily, that has a

unique N-terminal domain not present in previously identified heregulins.

C damma-HRG is secreted by human breast cancer MDA-MB-175 calls. It leads

C damma-HRG is secreted by human breast cancer MDA-MB-175 calls. It leads

C to the formation of a constitutive active receptor complex and stimulates

C to the formation of a constitutive active receptor complex and stimulates

C to the growth of these calls in an autocrine manner. The nucleic acid was

C isolated by screening a MDA-MB-175 with a probe corresponding to the EGF-

CI like domain and part of the N-terminal sequences of HRG-beta-3. It can be

CC used for the recombinant production of gamma-HRG, or for in vivo or ex

C vivo gene therapy. A claimed nucleic acid, which is complementary to the

CC nucleic acid sequence encoding the N-terminal domain of gamma-HRG, is

CD to reduce production of gamma-HRG by MDA-MB-175 cells. The invention

C provides claimed methods for activating an ErbB receptor and for

C contacting the cell (preferably a glial or muscle cell) with gamma-HRG

```
This is the nucleotide sequence of cDNA coding for gamma-heregulin (gamma-HRG, see AAY06339). The invention provides HRG ligands, including gamma-HRG, that have affinity for and stimulate HER2, HER3 and/or HER4 receptors in autophosphorylation. A new method of treating respiratory distress syndrome in humans uses HER2, HER3 and/or HER4 receptor ligands as epithelial growth factors. A novel method of inducing epithelial growth and/or proliferation comprises contacting a normal epithelial cell which expresses HER2, HER3 and/or HER4 receptors with an isolated ligand which activates, HER2, HER3 and/or HER4 receptors or their combination. The patent discloses a method for inducing hair cell generation, or inner cear-supporting cell growth, regeneration, and/or proliferation, by heregulins (HRG), the ligand for HERZ-19BR3 dimeric receptors. Heregulin proteins function as activators of HER-2 oncogene and result from alternate splicing of a single gene mapped to chromosome 8p. The two major types, alpha and beta HRG's are based on two variant EGF-like (epidermal growth factor) domains, that differ in their C-terminal ends. This method can be used to increase the number of inner-ear-supporting cells and for treatment of hair cell related hearing disorders and accoustic associated with tissue damage, e.g. ototoxic injury, acoustic assault, degenerative hearing loss, balance impairments, damage associated with surgery or physical injury and inner ear disorders crelated to hair cell dysfunction. The present sequence is the human heregulin variant, gamma-HRG protein encoding CDNA, isolated from a native HRG source, such as human MDA-MB-175 cells. It has atleast one

                                                                                       The invention relates to inducing epithelial cell growth and/or proliferation comprising contacting a normal spithelial cell, which expresses HER2, HER3 and/or HER4 (preferably HER2/HER3, HER2/HER4, HER3 or HER4) receptors with an isolated ligand such as HER3/HER4, HER3 or HER4 receptors with an isolated ligand such as mergalin (HRG) which activates HER2, HER3 and/or HER4 receptors. The method is used for inducing epithelial cell (preferably lung cell) growth and/or proliferation, for increasing lung surfactant protein A and for
                                                                                                                                    9

treating respiratory distress or emphysema, for treating chronic obstructive pulmonary disease (COPD) e.g. chronic bronchitis, asthma, neonatal pulmonary diseases including neonatal respiratory distress syndrome, meconium aspiration syndrome, otherwise including sease including neonates, congenital diaphragmatic hernia and acute lung disease of the neonate, congenital diaphragmatic hernia and acute lung injuries including smoke or chemical inhalation, pneumonitis due to aspiration, radiation, near drowning, cystic fibrosis and other epithelial cell resections, ulcers, lesions and tissue tears as normal epithelial cell growth factors. For treating infants/neonates with respiratory distress conswell as youth and adult with poor lung function due to lung injury or damage. The HRG binds with varying and very high affinity to the HBR2, HBR3 and/or HBR4 receptors. The method simulates growth and profile the epithelial cells, repairing and re-establishing the cellular barriers of organs and allowing the affected tissue to develop comman physiological functions more quickly. Hence the method improves convening and speeds of the development of a barrier to infection while

Useful for treating or preventing a NOVX-associated disorder such as useful for treating or preventing a NOVX-associated disorder such as cardiomyopathy or atherosclerosis, where the disorder is related to cell signal processing and metabolic pathway modulation in a subject, or preferably human. The invention is also useful for treating metabolic of disorders (e.g. obesity), diabetes, infectious disease, neurodegenerative disorders, haematopoietic disorders and various cancers. The molecules of the invention are also useful for treating or preventing cirrhosis, pancreatitis, learning and memory defects, infertility, congenital heart defects, acne, hair growth, pigmentation disorders, endocrine disorders, neurological disease, bone marrow transplantation, endocrine diseases, allory and inflammation, nephrological disorders, urinary system conservation callory and inflammation, nephrological disorders, urinary system conservation callored disorders. The present nucleic acid sequence represents a NOVX gene. This sequence

The present sequence is a coding sequence for a NOV protein. The NOV proteins and coding sequences are useful for treating or preventing NOV-associated disorders or in the manufacture of a medicament for treating the disorders, such as cancer, heart disease, inflammation, autoimmune disorders, allergies, blood disorders, AIDS, diabetes, obseity, asthma, igA nephropathy, orithosis, arthritis, AIDS diabetes, obseity, asthma, e.g. bacterial, viral, parasitie), atroke, muscular dystrophy, epilepsy, and other wasting disorders associated with chronic diseases. NOV1 is a

```
The invention relates to an isolated polypeptide comprising CGDD1-12 (cell growth, differentiation and death), a naturally occurring amino acid sequence at least 90% identical to CGDD, a biologically active caid sequence at least 90% identical to CGDD, a biologically active fragment or an immunogenic fragment. Also included are the polymuclectides encoding CGDD1-12, a recombinant polymuclectide comprising a promoter sequence operably linked to the CGDD oplymuclectides, a cell transformed with the recombinant polymuclectide, an anti-cGDD polymuclectides, a cell transformed with the recombinant polymuclectide, an anti-cGDD polymuclectide in compounds which bind to/modulate or are atomitized of CGDD or alter the expression of CGDD polymuclectide and acceptants and antagonists are useful for diagnosing, treating or cGDD polymuclectide with abservant expression of CGDD, particularly cell proliferative (e.g. arteriosclerosis, atherosclerosis, proveysmal nocturnal haemoglobinuria, polycythaemia or articularly cell proliferative (e.g. arteriosclerosis, atherosclerosis, primary thromobocytopaenia or cancer), developmental disorders (e.g. renal tubular acidosis, an amendal retardation), neurological disorders (e.g. Alzheimer disease, parkinson's disease or epilepsy), reproductive disorders (e.g. infertility or a disruption in the menstrual cycle), or autoimmune/inflammatory disorders (e.g. Alzheimer CC (acquired immunodeficiency syndrome) allergies asthma, autoimmune thyroiditis, contact dermatitis, parcasitic, processing context dermatitis, parcasitic, processing context dermatitis, parcasitic, processing to the effects of infections. They are also useful in the assessment of the effects of exceptences of proceins associated with CGDD. The present sequence encodes congounds on the expression of nucleic acid and amino acid sequences of proceins associated with CGDD. The present sequence encodes

New NOVX polypeptides and polynucleotides useful for treating NOVX-

WPI; 2002-732706/79. P-PSDB; ABP53588

Gunther E,

```
The present invention describes novel human proteins designated NOVX, where X is 1 to 20 e.g. NOVI. NOVX sequences can have neuroprotective, cytostatic, anticonvulsant, cerebroprotective, noctropic, cardiovascular, antidiabetic, antiinflammatory, antirheumatic, antiarthritic, virucide, immunosuppressive, antiallergic, antianeamic, antiarthritic, virucide, immunosuppressive, antiallergic, antianeamic, antiarthritic, virucide, therapy. The NOVX proteins, nucleotides or antibodies can be used in gene therapy. The NOVX proteins, nucleotides or antibodies can be used in the human disease selected from NOVX-associated disorder. Such as cancers convary, testis and uterus), neurological disorder. Such as cancers (e.g. leukaemia, lymphoma, melanoma or cancer of the liver, lung, muscle, ovary, testis and uterus), neurological disorders (e.g. epilepsy, stroke, ischaemic cerebrovascular disease, Alzheimer's disease or Pick's disease, alzheimer's disease or Pick's disease, or goitre), gastrointestinal confiscative collitis, or gastric and duodenal disorders), autoimmune diseases (e.g. allergic reactions, autoimmune haemolytic anaemia, or rheumatoid arthritis), viral, bacterial, fungal, helminthic and protozoal infections. The NOVX proteins can be used as immunogens to produce antibodies and as vaccines. The NOVX nucleotide sequences may be biological samples (tissue typing), and in forense indentification of a hinhorical sammle whe present sequences may be biological samples (tissue typing), and in forense indentification of a hinhorical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1245 CAGAAGGATGCATTGATTGGAGTATATGGCCGGAAAGGCTTACCGCCTTCCCATACTCAG 1304

WPI; 2002-732706/79. P-PSDB; ABP53589 New NOVX polypeptides and polymucleotides useful for treating NOVX-associated disorders, such as cancers, neurological disorders, disorders of vesicular transport, gastrointestinal disorders, and autoimmune diseases

Claim 8; Page 123-125; 444pp; English.

The present invention describes novel human proteins designated NOVX,
where X is 1 to 20 e.g. NOVI. NOVX sequences can have neuroprotective,
cytostatic, anticonvulsant, cerebroprotective, nootropic, candiovascular,
cytostatic, anticonvulsant, cerebroprotective, notropic, candiovascular,
contidiabetic, anticonvulsant, cerebroprotective, antiarthritic, virucide,
immunosuppressive, antiallergic, antianaemic, antibacterial, fungicide,
immunosuppressive, antiallergic, antianaemic, antibacterial, fungicide,
controzoacide and antihelminthic activities, and can be used in gene
therapy. The NOVX proteins, nucleotides or antibodies can be used in the
control a medicament for treating a syndrome associated with a
human disease selected from NOVX-associated disorder. such as cancers
(e.g. leukaemia, lymphoma, melanoma or cancer of the liver, lung, muscle,
covary, testis and uterus), neurological disorders (e.g. epilepsy, stroke,
ischaemic cerebrovascular disease, Alzheimer's disease or pick's
disease, disorders of vesicular transport (e.g. cystic fibrosis,
disorders (e.g. ulcerative colitis, or gastric and duodenal disorders),
autoimmune diseases (e.g. allergic reactions, autoimmune haemolytic
antoimmune diseases (e.g. allergic reactions, autoimmune haemolytic
and protozoal infections. The NOVX proteins can be used as immunogens to
produce antibodies and as vaccines. The NOVX nucleotide sequences may be

The present invention describes novel human proteins designated NOVX, where X is 1 to 20 e.g. NOV1. NOVX sequences can have neuroprotective, where X is 1 to 20 e.g. NOV1. NOVX sequences can have neuroprotective, where X is 1 to 20 e.g. NOV1. NOVX sequences can have neuroprotective, cardiovascular, antidiabetic, antidinflammatory, antidianematic, antidarcerial, fundicide, protozoacide and antihelminthic activities, and can be used in gene therapy. The NOVX proteins, nucleotides or antibodies can be used in the manufacture of a medicament for treating a syndrome associated with a contrapy. The NOVX proteins, nucleotides or antibodies can be used in the manufacture of a medicament for treating a syndrome associated with a contrapy. The NOVX measociated disorder selected from NOVX-associated disorder, such as cancers (e.g. leukaemia, lymphoma, melanoma or cancer of the liver, lung, muscle, ovary, testis and uterus), neurological disorders (e.g. epilepsy, stroke, ischaemic cerebrovascular disease, Alzheimer's disease or Pick's disbetes mellitus, Grave's disease, or goitre), gastrointestinal disorders (e.g. ulcerative colitis, or gastric and duodenal disorders), candenia, or rheumatoid arrhritis), viral, bacterial, fungal, helminthic and protozoal infections. The NOVX proteins can be used as immunogens to produce antibodies and as vaccines. The NOVX proteins can be used as immunogens to used in chromosome mapping, identifying individuals from minute cological samples (tissue typing), and in forensic identification of a biological sample (the present sequence encodes human NOVISD, which is
                                                                                                                                                                                                                                                                                         Wolenc AR, Vernet CAM, Eisen A, Liu X, kets RA, Tchernev VT, Spaderna SK, Gorman L; jan M, Gusev V, Gangolli EA, Guo X, Shenoy S; SJ, BOJGOSF, Burgess CE, Edinger S, Ellerman K; on G, Millet I, Macdougall JR;

                                                                                                           The present invention describes novel human proteins designated NoVX, where X is 1 to 20 e.g. NoVI. NoVX sequences can have neuroprotective, cycostatic, anticonvulsant, cerebroprotective, nootropic, cardiovascular, articlabetic, anticonvulsant cycle anticonvulsant. Antipleumatic, antibatchitic, virucide, immunosuppressive, antihalengic, antipacterial, fungicide, protozoacide and antihelminitic activities, and can be used in gene therapy. The NoVX proteins, nuclectides or antibacterial, fungicide, protozoacide and antihelminitic activities, and can be used in gene manufacture of a medicament for treating a syndrome associated with a manufacture of a medicament for treating a syndrome associated with a convary, testis and uterus), neurological disorders (e.g. plukaemia, lymphoma, melanoma or cancer of the liver, lung, muscle ovary, testis and uterus), neurological disorders (e.g. epilepsy, stroke, ischaemic cerebrovascular disease, Albheimer's disease or pick's disease, disease, or goitre), gastrointestinal disorders (e.g. utcerative colitis, or gastric and duodenal disorders), autoimmune diseases (e.g. allergic reactions, autoimune haemolytic and protozoal infections. The NoVX proteins can be used as immunogens to produce antibodies and as vaccines. The NoVX nuclectide sequences may be used in chromosome mapping, identifying individuals from minute con concast con chromosome mapping), and in forensic identification of a concast con chromosome protoses the present sequence encodes human NoVISa, which is

The present invention relates to methods of detecting a prostate cancerassociated transcript in a cell from a patient. The method comprises contacting a biological sample from the patient with prostate cancerasociated polynuclectides (designated PC genes) that selectively hybridise to a sequence that is at least 80% identical to them. The prostate cancerassociated polynuclectide sequences are differentially prostate cancerassociated polynuclectide sequences are differentially expressed in prostate tumour tissue or in prostate cancer and are derived from the tissues of various organisms such as humans or other mammals (e.g. mice, sheep and dogs). The methods of the invention are useful for diagnosing or treating prostate cancer associated genes are useful for diagnosing or treating prostate cancer is associated genes are useful for diagnosing or treating prostate cancer or associated genes are useful for diagnosing or treating prostate cancer or as well as for identifying modulators of prostate cancer or agents that in the prostate cancer. The nucleic acid sequences are particularly useful in gene therapy, as a vaccine or in antisense applications.

ABK92115-ABK92263 represent prostate cancer ansociated polynucleotide

Mammalia

Prostate cancer-associated DNA sequence #116.

gene therapy;

```
The invention relates to polymucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to eytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, hammatopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acids encoding polypeptides with cytokine-like activities, useful in diagnosis and gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Asundi V, Zhou P, Xu C, Cao Y;

The nucleic acid is useful for identifying a compound that binds the nucleic acid. The nucleic acid is useful in gene therapy, in screening assays, in detection assays e.g. chromosomal mapping, cell and tissue typing and forensic biology, predictive medicine e.g. diagnostic assays, prognostic assays, monitoring clinical trials and pharmacogenomics and methods of

treatment including therapeutic and prophylactic. The nucleic acid is also useful cor useful for expressing NoVX protein. The nucleic acid is also useful to provide polynuclectide reagents e.g. labelled probes that are useful con an in situ hybridisation technique, for identifying a specific tissue (for example brain tissue) and for use in forensic science. The nucleic acid is also useful for mapping genes on a chromosome and thus locating come regions associated with genetic disease, identifying an individual from a minute biological sample and to aid in forensic identification of biological sample. The nucleic acid is also useful for treating cancer, especially cancers of the breast, colon, lung, pancreas or uterus, or a melanoma or sarcoma. The nucleic acid is also useful for treating cancer, atheroscalerosis, ischemic heart disease, haemorrhage, disbetes mellitus, corputating haematopois, hypertension and systemic lupus erythematosus. NOVX protein encoded by the nucleic acid is useful for regeneration and systemic lupus crythematosus. NOVX protein encoded by the nucleic acid is also useful for treating infections, corputating haematopoisis, for regeneration of bone, cartilage, tendon ligament and/or nerve tissue growth or regeneration and for wound corputation are acid is also useful for treating infections, corputating haematopoises, Alphaimer's disease, Hunting ton's disease, nucliple sclerosis, amyotrophic lateral sclerosis (ALS), peripheral corputation and injury, peripheral nerve trauma or injury and other neuropathies, brain injury, peripheral nerve trauma or injury and other neuropathies, bunn injury, peripheral nerve trauma or injury and other neuropathies, bunnan breast tumour associated protein 47-like polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 1429 BP; 349 A; 426 C; 340 G; 312 T; 0 U; 2 Other;
